# KEERVANI KANDALA

**Date Prepared:** 05 October 2026

**Contact Information:** kandala@wustl.edu

## EDUCATION

| | | | |
|---|---|---|---|
| 06/2025- Present | Ph.D. | Biomedical Informatics & Data Science | Washington University in St. Louis, USA |
| 08/2023- 05/2025 | M.S. | Health Informatics, *Honors* | Yale University, USA |
| 01/2021- 08/2023 | B.Sc. | Systems Biology, *First Division with Distinction* | University of Hyderabad, IND |

## RESEARCH INTERESTS

Predictive oncology; computational pathology; cancer imaging; multimodal AI; molecular imaging and spatial omics; imaging biomarkers; treatment-response prediction.

## RESEARCH EXPERIENCES

### Oncology and Cancer Imaging

### Washington University in St. Louis

**Mallinckrodt Institute of Radiology** **St. Louis, MO**
*PhD Advisor: Dr. José Marcio Luna* *Dec 2025- Present*

- Engineered a multimodal pipeline integrating H&E whole-slide image embeddings with MALDI mass spectrometry glycomics to characterize tumor fucosylation patterns in a multi-institutional triple-negative breast cancer cohort, testing whether self-supervised morphological representations co-vary with molecularly encoded signals absent from visual inspection.
- Developing a multimodal pipeline integrating diffusion MRI (DBSI) with MALDI mass spectrometry imaging to investigate non-invasive imaging as a surrogate for tumor tissue biochemistry in prostate cancer, testing spatial co-variation of DBSI fiber fraction with desmoplastic collagen remodeling across co-registered specimens spanning Gleason score gradients.
- Conducting research at the intersection of computational pathology and multi-omics, with a review on engineering design choices in vision foundation models govern representation learning from H&E whole-slide images, transfer across clinical contexts, and failure modes.

### Yale University School of Medicine

**Department of Urology** **New Haven, CT**
*Mentors: Dr. Fady Ghali, Dr. Preston Sprenkle, Dr. Michael Leapman* *Aug 2024- May 2025*

- Developed and applied a suite of survival analysis methodologies, including a provenance-preserving KM reconstruction platform, gated counterfactual survival modeling via cross-trial hazard transport, and RMST vs. median survival discrepancy analysis to interrogate OS benefit sensitivity and detect non-proportional hazard distortions across oncology RCTs.
- Performed data analysis and statistical modeling across multiple prostate cancer outcomes studies examining radiotherapy and survival in metastatic disease, perineural invasion in the MRI-fusion biopsy era, post-ablation functional outcomes, and treatment initiation delays during COVID-19, therapeutic role of lymph node dissection in variant subtype bladder cancer, etc.

**Center for Outcomes Research and Evaluation** **New Haven, CT**
*Mentor: Dr. Sanjay Aneja* *Aug 2023- Aug 2024*

- Developed a deep learning MRI survival model for primary CNS lymphoma using a tumor-size-weighted 2D CNN ensemble, achieving 0.73 internal AUC and 0.64 external AUC on an independent cohort, with time-dependent AUC, C-statistics, and Kaplan-Meier risk stratification for clinical interpretability.
- Developed a Python-based interactive GUI to automatically generate publication-quality figures including heatmaps, pie charts, violin plots, bar charts, and Kaplan-Meier survival curves.

**Biomedical Informatics and Computational Medicine**

**Washington University in St. Louis**

**Institute for Informatics, Data Science and Biostatistics** **St. Louis, MO**
*Mentors: Dr. Joanna Abraham, Dr. Thomas Kannampallil* *Jun 2025- Dec 2025*

- Led real-world validation of a production machine learning clinical decision support system using timestamp-level EHR event logs, identifying performance drift and operational failure modes.
- Built R-based statistical pipelines and applied a difference-in-differences framework to quantify the impact of ambient AI scribe deployment on outpatient visit cycle time, documentation latency, and clinician throughput, informing health system AI deployment strategy.
- Developed clinician-facing training materials in collaboration with clinical and operational stakeholders to support adoption of a multidisciplinary collaborative handoff tool and improve patient safety during care transitions.

**Yale School of Medicine**

**Department of Radiology and Biomedical Imaging** **New Haven, CT**
*Mentor: Dr. Ajay Malhotra* *Aug 2023-Present*

- Conducting national workforce and training-pipeline analyses using CMS Medicare, NPPES, NIH RePORTER, MarketScan, and AAMC/ACGME/NRMP datasets to quantify structural trends in U.S. radiology practice, including the role of international medical graduates, graduate medical education funding, academic practice concentration, and subspecialization patterns.
- Analyzing reimbursement and utilization of medical imaging techniques and disparities in NIH funding among clinician-scientists to evaluate financial and policy drivers of academic radiology.

**Department of Emergency Medicine** **New Haven, CT**
*Mentors: Dr. Andrew Loza, Dr. Andrew Taylor, Dr. Raphael Sherak, Dr. David Chartash* *Jul 2024 - May 2025*

- Assisted in the design and execution of a large-scale medical foundation model project, training transformer models on longitudinal EHR data from 118M patients, 115B medical events, and up to 1.7T training tokens, demonstrating that generative AI can accurately forecast disease risk, differential diagnoses, and hospital utilization across 78 real-world clinical tasks.
- Designed experiments for a scaling-law framework for healthcare AI models, establishing compute-optimal relationships between model size, data volume, and training FLOPs that directly guided the development of 1B-parameter foundation models for zero-shot clinical prediction and health-system decision support.
- Developed a decision-analytic cost-effectiveness framework to estimate optimal empiric antibiotic treatment thresholds for suspected UTIs in older adults, integrating EHR-derived predictors, standardized cost and utility inputs, and Markov modeling to quantify downstream health outcomes and economic impact.
- Developed ML models identifying throughput bottlenecks associated with ED overcrowding and prolonged length of stay.

**PUBLICATIONS**

**Manuscripts in Preparation**

1. **Kandala, K.**, Scott, D.A., Drake, R.R., Angel, P.M., Gastounioti, A., and Luna, J.M. Deep morphology embeddings from H&E capture fucosylation signatures in triple-negative breast cancer. Manuscript in preparation; planned submission to *Nature Communications*, December 2026.
2. **Kandala, K.**, Ippolito, J.**,** Payne, P., Marcus, D., Angel, P.M., Gastounioti, A., and Luna, J.M. Foundation Models in

Computational Pathology: How Design Choices Shape What Models Learn, Transfer, and Fail to Learn from H&E Whole-Slide Images. Manuscript in preparation; planned submission to *Nature Biomedical Engineering*, January 2027.

3. **Kandala, K.†**, Utt, K.†, Weimholt, C., Song, S.K., Angel, P.M., Drake, R.R., Luna, J.M. and Ippolito, J.E. Spatially informed DBSI-MALDI analysis reveals reproducible microstructure-molecular associations in prostate cancer. Manuscript in preparation; planned submission to *Radiology: Imaging Cancer*, January 2027.

## AWARDS AND SCHOLARSHIPS

**Title:** Siteman Travel Award **Year:** 2026
**Awarding Organization:** The Alvin J. Siteman Cancer Center
**Amount:** $1500 (maximum possible amount)
**Description:** Highly competitive award supporting the career development of cancer research trainees by funding travel related expenses to present research at conferences.

**Title:** MSACL Young Investigator Educational Grant **Year:** 2026
**Awarding Organization:** Association for Mass Spectrometry & Advances in the Clinical Lab (MSACL)
**Amount:** $535 (50% conference registration and 100% short-course registration)
**Description:** Competitive merit-based award supporting early-career researchers whose abstracts and applications demonstrate strong potential to contribute to clinical mass spectrometry and translational laboratory medicine. Selected as one of 51 Young Investigator recipients for MSACL 2026, in conjunction with an accepted podium presentation.

**Title:** The J.N. TATA Endowment for Higher Education of Indians **Year:** 2024
**Awarding Organization:** The J.N. TATA Endowment
**Amount:** $22,000
**Description:** Prestigious merit-based award supporting 90-100 Indian students out of 2000 applicants, pursuing education abroad, recognizing academic excellence, leadership potential, and commitment to contributing to India's development.

**Title:** Yale Collaborative Action Project **Year:** 2024
**Awarding Organization:** Yale Institute for Global Health
**Role:** Co-Investigator
**Amount:** $12,000
**Description:** Conducted a qualitative research study to explore societal perceptions and cultural attitudes toward the marriageability of individuals with diabetes in South India. The project aimed to understand the interplay between health conditions and marriage prospects, identify stigma-related challenges, and provide recommendations to inform culturally sensitive health and social interventions.

**Title:** Second Place, Global Health Case Competition **Year:** 2024
**Organization:** Yale Institute for Global Health
**Amount:** $500
**Description:** Collaborated with a multidisciplinary team to propose innovative solutions for improving access to health care in refugee populations of Sudan.

## PROFESSIONAL SERVICE

1. **2026**: Scientific Session Co-Chair, “Spatialomics Data Integration”, Association for Mass Spectrometry & Advances in the Clinical Lab (MSACL) Annual Meeting.
2. **2025**: Abstract Reviewer, AMIA Clinical Informatics Conference
3. **2023 to Present**: Abstract Reviewer, American Society of Neuroradiology Annual Meeting

## TEACHING EXPERIENCE

| Term | Title | Faculty | Location |
|---|---|---|---|
| Fall 2026 | Introduction to Biomedical Informatics | Dr. Zachary Abrams<br>Dr. Mac Hofford | Institute for Informatics, Data Science, Biostatistics, Washington University in St. Louis |
| Fall 2025 | Mixed Methods in Biomedical Informatics | Dr. Joanna Abraham,<br>Dr. Po-Yin Yen | Institute for Informatics, Data Science, Biostatistics, Washington University in St. Louis |

| | | | |
|---|---|---|---|
| Spring 2025 | Applied AI in Medicine | Dr. Andrew Taylor,<br>Dr. Wade Schulz | Yale School of Public Health,<br>Graduate School of Arts & Sciences |
| Spring 2025 | Biochemistry | Dr. Ronald Breaker,<br>Dr. Donald Englemann | Yale College,<br>Graduate School of Arts & Sciences |
| Fall 2024 | Lab Course in Neurobiology | Dr. Haig Keshishian,<br>Dr. Kathy Zhang | Yale College |
| Spring 2024 | Laboratory for Biology of Reproduction and Development | Dr. Seth Guller,<br>Dr. Shannon Whirledge,<br>Dr. Harvey Kliman | Yale College |
| Spring 2022 | Data Science: Answering Questions with Data | Dr. Konrad Kording,<br>Dr. Lyle Ungar | University of Pennsylvania (Remote) |

## LEADERSHIP AND COMMUNITY SERVICE

**Washington University Young Scientist Program** **Jan 2026 – Present**

- Serve as Financial Director, managing a $40,000 endowment supporting K-12 STEM outreach for historically underrepresented students in the St. Louis area.
- Conduct hands-on science demonstrations in local K-12 classrooms across the St. Louis area.
- Support the Summer Focus program, a paid summer research internship initiative placing high school students from historically excluded communities in WashU laboratories.

**HAVEN Free Clinic** **Jan 2024 – May 2024**

Worked on analyzing patient no-show rates and identifying contributing factors to develop interventions for reduction, enhancing clinic efficiency and access to care at HAVEN.

**American Lung Cancer Screening Initiative** **Dec 2021 – Dec 2022**

- Spread awareness about lung cancer and lung cancer screening by reaching out to communities, educational institutions, hospitals, and corporations, delivering offline and online presentations to over 500 people.
- Led a team of over 21 students from different nations to develop and translate educational material for patients and physicians into over 20 major Indian and international languages. Worked with US Congress members to draft and promote legislation aimed at increasing awareness of lung cancer screening and expanding eligibility criteria for screenings.
- Co-drafted Senate Resolution 863, introduced on December 7, 2022, in the 117th Congress (2021–2022), entitled, "A resolution designating November 2022 as 'National Lung Cancer Awareness Month' and expressing support for early detection and treatment of lung cancer."
